CLEANING PROCEDURE FOR THE PLOTTER SCREEN

Cleaning your chart plotter screen is a very important operation and must be done carefully. Since the surface is covered by an antireflective coating, the procedure for cleaning all the surfaces can be performed in the following way. You use a tissue or lens tissue and a cleaning spray containing Isopropanol (a normal spray cleaner sold for the PC screen, for example PolaClear by Polaroid). Fold the tissue or lens tissue into a triangular shape, moisten the tip and use the index finger behind a corner to move the tissue across the surface, in overlapping side to side strokes. If the tissue is too wet, a noticeable wet film will be left in its path and you will need to repeat the process. If too dry, the tissue won’t glide easily, and may damage the surface.

1. Introduction

If you have not used a position-finding instrument before and intend to use your chart plotter for navigating, we suggest you should read this User Manual and make sure you are familiar with its contents.

The User Manual is divided into three main parts. Chapter "Before You Begin" introduces you to the basic information to get you start using the chart plotter. Chapter "For the New User" should be read first to become familiar with your new instrument. Chapter "For the Experienced User" introduces the advanced features of the chart plotter.

Throughout this User Manual, the labelled keys are shown in capitals letters enclosed between single inverted commas, for example 'MENU'; the software keys are shown in small capital letters enclosed in square brackets, for example 'ACCEPT'.

Menu operations are in bold characters listed by keys sequence with the menu names enclosed between inverted commas, for example 'ENTER' + "MARK" + 'ENTER' + 'Move' + 'ACCEPT' means: press the 'ENTER' key, using the cursor key select the Mark option and press 'ENTER' to place Mark, press the software key 'Move' to change the Mark position and press the software key 'ACCEPT' to confirm the new position.

Terms underlined, for example Mark, are explained in the Chapter 6.
Into all information windows items are displayed in gray color when there are not active (it is not possible to select them and place on the cursor).

Any menu operation and function activation in this User Manual is related to all chart plotter models (see the previous table). Whenever it is necessary, a note has been inserted for the other models.

1.1 FEATURES

The chart plotter is a computer specifically designed for nautical use but, more precisely, to ease and speed up all calculations, which so far have been done manually. If connected to a positioning instrument, the chart plotter displays the current position, the speed, and the heading of the boat and its Track. The user information like Waypoints, Marks and Tracks can then be stored on a User C-CARD and can be recalled at any time. On the screen are shown navigation data and cartographic information obtained from electronic charts of C-MAP C-CARD.

1.2 BASICS

The chart plotter is controlled by a keyboard: there are labelled keys and software keys (soft keys). The labelled keys are dedicated to specific functions, the
soft keys have different functions according to the modes of operation: their labels for the current functions, located on the front panel, are shown on the screen right above the keys. There is also a cursor key to move a cursor across the screen. As you press a key, a single audio beep confirms the key action; every time the key pressed is not valid, three rapid beeps sound indicates that no response is available.

1.3 IF YOU NEED ASSISTANCE

If your chart plotter does not operate properly, please refer to System Test. Most common operating difficulties can be diagnosed using these tests. If you still need assistance, call your local dealer, reporting the information available in the System Information page, selected following the procedure:

- Press any soft key + 'SETTING' + "About..." + 'ENTER'

Choice for Nav-Station 11:
- 'SERVICE' + "About..." + 'ENTER'

1.4 UPDATE WORLDWIDE CARTOGRAPHY

It is possible to select the Software Update menu from the Information page following the procedure:

- Press any soft key + 'SETTING' + "About..." + 'ENTER' + Insert the special C-CARD WWB UPLOAD + 'PAGE' + "Update Worldwide Cartography" + 'ENTER' + 'ENTER'

Choice for Nav-Station 11:
- 'SERVICE' + "About..." + 'ENTER' + Insert the special C-CARD WWB UPLOAD + 'PAGE' + "Update Worldwide Cartography" + 'ENTER' + 'ENTER'
2. Before You Begin

This chapter provides basic information to get you start using the chart plotter; it will help you to become familiar with the chart display and the functions of the controls before you start using the chart plotter.

2.1 THE KEYBOARD

The 'ZOOM IN' and 'ZOOM OUT' keys
Press 'ZOOM IN' shows more details of a smaller area, by changing the chart scale and zooming in on your display. Press 'ZOOM OUT' to operate similarly to the 'ZOOM IN', except in reverse, changing the scale and showing a wider, otherwise less detailed view.

The cursor key
Moves the cursor about on the display screen, quickly and accurately. It also scrolls the desired option in the menu page(s): up/down move the current menu selection; right executes the function assigned to the active selection in the menu (same as 'ENTER'). Up/down in the number/character input procedure changes the value, left/right move the cursor on the previous/next position.
If in Home (Navigate) mode, it allows to exit from Home mode.

The 'ENTER' key
Selects the desired option, confirms selection, creates Objects (Mark, Waypoint, MOB) and finds Information on Objects.

NAV-STATION 11 VCAM:
From any page pressing 'ENTER' for 2 seconds it is possible to activate the display of the Video Input 1.

The 'CLEAR' key
Excluding specific situations, returns to the previous menu or leaves a menu without making changes. If you are not into a menu, if the GPS computing a valid fix position and the chart plotter is not in Home mode, pressing 'CLEAR' sets Home mode. When Home (called also Navigate) mode is set, the cursor is not shown anymore and all cartographic functions (zoom, scroll, etc.) are leded by the fix position. The fix is centered in the map display and the map scrolls underneath as the fix position changes. To deactivate Home mode move the cursor.

NAV-STATION 11 VCAM:
From any page pressing 'CLEAR' for 2 seconds it is possible to activate the display of the Video Input 2.

The 'PAGE' key
Press 'PAGE' to select the configuration. After pressing 'PAGE', the Page selection menu (with current page selected) is shown on the screen. For example, if the charting is on the screen, in the Page selection menu the selected item is Chart.
Moving cursor up/down selects the previous/next item. After the desired item has been selected, pressing 'ENTER' or moving cursor to right the Page selection menu has been closed and the current selection is shown as active page. Otherwise pressing 'CLEAR', the Page selection menu is closed with no changes. Also it is possible to select two pages at the same time (for example Chart and Depth Graph).

**NAV-STATION 11 PANORAMA:**

From the page selection menu it is possible to select Video 1 or Video 2, showing image from video camera 1 or video camera 2 at full screen.

Press and hold 'PAGE' for 1 second adjusts brightness and contrast (and handles the Palette ONLY FOR COLOR CHART PLOTTER).

**The 'GO TO' key**

Allows to select the main navigation functions to a Target. The 'GO TO' key is an auto-diagnostic type because the associated menu disables automatically the menu items that are not allowed in that moment. A menu item is disabled when the label is shown in light grey color, otherwise if the item label is shown in black color, the item is enabled. An item is automatically disabled when the associated function is not allowed.

The Goto menu that appears after the 'GO TO' key pressing shows the following 6 items: "LAST GOTO", "CURSOR", "MARK", "ROUTE", "PORT SERVICES", "CLEAR GOTO".

The "LAST GOTO" item when selected shows a window with the coordinates of the previous inserted Target.

The "CURSOR" item is disabled when in Navigation mode (for the Navigation (Home) mode meaning see the 'CLEAR' key in this paragraph); this item is enabled only if the cursor is moved to the desired position for inserting Target.

The "MARK" item is disabled if no Mark has been stored.

The "ROUTE" item is disabled if no Waypoint has been stored.

The "PORT SERVICES" item is disabled if no C-CARD with charting data has been inserted.

The "CLEAR GOTO" is enabled only if a Target has been inserted and all other items are disabled (because the Target is present yet).

Another characteristic of the 'GO TO' key is the following: to confirm selection it is possible to press 'ENTER' or 'GO TO'. So you can set many navigation functions without moving finger from the 'GO TO' key. For example to set navigation to cursor, pressing 'GO TO' twice, or to delete navigation pressing this key for 3 times.

**The software keys (soft keys)**

The software keys (soft key) have different functions according to the modes of operation: their labels for the current functions, located on the front panel, are shown on the screen right above the soft key. When the soft key labels are shown, by pressing the associated soft key the relative function is executed. By pressing 'CLEAR' the four soft key labels disappear.

When the soft key labels are not shown and any menu is not open, by pressing one of the four soft keys their labels for the current functions are shown on the screen immediately above the soft keys:

- **SETTING**: selects the Setting Menu
- **MAP**: selects the Map Menu
- **DATA**: select the Data Menu
- **FOCUS**: is active only if the Fish Finder mode has been selected. Allows to select the active page among the charting page and the Fish Finder page. Refer to the related User Manuals for more information.
2.2 TURNING THE CHART PLOTTER ON AND OFF

Before powering On the chart plotter, check for the correct voltage (10-35 volt dc for Nav-Station 5/11, 10-18 volt dc for Nav-Station 6) and the correct connections with the positioning instrument.

2.2.1 TURNING ON

Press and hold 'POWER' for 1 second

Nav-Station 6:

Press and hold any key for 1 second

The chart plotter emits one rapid beep sound and a title page is opened. After a few seconds, the Caution Notice pages is displayed, reminding you that the chart plotter is only an aid to navigation, and should be used with appropriate prudence. The electronic charts are not intended to substitute for the official charts.

2.2.2 TURNING OFF

Press 'POWER' and hold for 3 seconds: a countdown timer appears on the screen, if you release the key before the countdown timer reaches zero, the chart plotter will remain On.

Nav-Station 6:

Press any soft key + 'SETTING' + "SHUT DOWN" + 'ENTER' + 'ACCEPT'
2.3 LCD ADJUSTMENT

To adjust the brightness and contrast of the LCD screen follow the procedure:

- **'PAGE' for 1 second**

or:

- Press any soft key + 'SETTING' + "LCD Adjustment" + 'ENTER'

**CHOICE FOR NAV-STATION 11:**
- 'SERVICE' + "LCD Adjustment" + 'ENTER'

On the screen two control bars appear, that indicate the actual values for contrast and brightness.

The screen brightness can be controlled using the 'BRIGHT -' and 'BRIGHT +' soft keys: adjusting the control bar the backlight reaches the desired level. Press 'ENTER' to confirm the new value (the soft key and the graphic windows disappear from the screen). Otherwise pressing 'CLEAR' exits from this menu without changes. To modify the contrast value follow the same procedure, using the 'CONTR -' and 'CONTR +' soft key.

The new values for contrast and brightness are retained until they are reset.

2.3.1 PALETTE (FOR COLOR CHART PLOTTER)

It is possible to set the palette used to enhance the visibility of the screen depending on the surrounding light condition. To select this option:

- **'PAGE' for 1 second**

or:

- Press any soft key + 'SETTING' + "LCD Adjustment" + 'ENTER' + 'PAGE'

**CHOICE FOR NAV-STATION 11:**
- 'SERVICE' + "LCD Adjustment" + 'ENTER' + 'PAGE'

It is possible to select Normal, Sunlight, Night Vision or NOAA for Palette. Normal is recommended when the chart plotter is not exposed to the direct sunlight. When this mode is set the maps are displayed in order to use colors as similar as possible to the ones used in the original paper charts. Sunlight is designed to enhance the visibility of the screen when the chart plotter is exposed to the sunlight. The maps are much brighter than in the other modes and the depth areas are filled with white color so different depth areas are not easily distinguishable. Night Vision is recommended when the environment is dark in order to reduce the glare of the display. The chart plotter displays maps and screen in darker colors. NOAA allows setting NOAA paper chart colors presentation.

2.4 SELECTING THE LANGUAGE

It is possible to select the language in which you wish information to be displayed (for screen labels, menus and options, but it is not affect the map information). The default setting is English.

- Press any soft key + 'SETTING' + "SETUP" + 'ENTER' + "Language" + 'ENTER'

**CHOICE FOR NAV-STATION 11:**
- 'SERVICE' + "SETUP" + 'ENTER' + "Language" + 'ENTER'

Choose the language you prefer and press 'ENTER' to confirm.

3. For the New User

In order to get started using your chart plotter, you must do the following things:

1) Your chart plotter must have been installed properly according to the installation instruction.

2) You must have performed the proper settings for use with your positioning instrument and inserting the C-CARD for navigating in area you wish.

3) You must have Power On to the chart plotter and adjust the brightness and contrast of the display.

Once this is done, you can use your chart plotter for navigation.

3.1 SCREEN DISPLAY CONFIGURATION

The chart plotter screen is displayed in several modes: as Chart page, Depth Graph page, Chart + Depth Graph page or Highway 3D page. In the following paragraphs are displayed examples of these pages, the Text Area configuration can be quite different depending from the used chart plotter.

Note
If the Fish Finder or Radar* is connected, other displaying pages are available too. See the Fish Finder or Radar* User Manual for more information.

*Only for Nav-Station 11

At the same time as these pages displayed, it is possible to show on the screen the display of chart and/or navigation information:

> Press any soft key + 'Data'

Choice for Nav-Station 11:

> 'Data'

The Data Menu appears on the screen, allowing to select the number of lines (max 4) and the values that are shown in the Text Area. The first column says that the line is displayed (√) or not (×): moving the cursor up and down select the desired line and using 'ENTER' to select it. It is possible to select max 4 lines. After
pressing 'ENTER' the data type has been selected. Pressing 'CLEAR' closes the Data Menu and the Text Area changes related to selected data.

### 3.1.1 CHART DATA

It is very important to know what is displayed on the screen.

- **'PAGE' + "CHART" + 'ENTER' + 'CLEAR'**
  
  shows the chart and the Text Area (if selected).

![Fig. 3.1.1 - A Text Area configuration](image)

### 3.1.2 DEPTH GRAPH PAGES

The Depth Graph can be selected in two different modes: in a reduced form on the right side of the screen or at full screen. To select the Depth Graph on the right side of the screen, select Chart and Depth Graph:

- **'PAGE' + "CHART" + 'ENTER' + "DEPTH" + 'ENTER' + 'CLEAR'**

![Fig. 3.1.2 - Example of Depth Graph on the right side of the screen](image)

Otherwise to select the Depth Graph at full screen, select only the Depth Graph (do not select Chart):

- **'PAGE' + "DEPTH" + 'ENTER' + 'CLEAR'**

![Fig. 3.1.2a - Example of Depth Graph at full screen](image)
3.1.3 **HIGHWAY 3D**

The **Highway 3D** page displays the navigation data in graphic mode. It is possible to set the information in the page according to the user requirements (see Par. 3.1).

\[ 'PAGE' + 'HIGHWAY 3D' + 'ENTER' + 'CLEAR' \]

Fig. 3.1.3 - Example of Highway 3D page

3.2 **MAP ORIENTATION**

Selects the orientation of your chart according to: North Up (the map is shown with North upwards) or Track Up (the map is displayed with the currently selected course leg upwards). The default setting is North Up.

\[ Press \ any \ soft \ key + 'SETTING' + 'SETUP' + 'ENTER' + 'Map \ Orientation' + 'ENTER' \]

**CHOICE FOR NAV-STATION 11:**

\[ 'SERVICE' + 'SETUP' + 'ENTER' + 'Map \ Orientation' + 'ENTER' \]

If Track Up has been selected, a window is shown to insert the Map Resolution.

3.3 **NAVIGATING TO A SINGLE DESTINATION**

3.3.1 **DISTANCE AND BEARING TO TARGET**

Place the cursor on location to navigate to and press 'GO TO', select "CURSOR" and press 'GO TO' again or 'ENTER'.

A straight line is shown on the screen connecting the Target with the ship's position. When the Target is placed, all navigation data are referred to this Target.

Fig. 3.3.1 - Navigation to a single destination
3.3.2 TIME TO GO

When the Target is set the TTG value (if selected) is displayed in the Text Area (see Fig. 3.4.1).

3.3.3 DELETING TARGET

Place cursor on Target icon, press 'STOP'. A window to confirm the navigation interruption appears on the screen. Press 'ENTER' or 'GO TO': the symbol that identifies Target remains on the screen until it is redrawn.

3.4 NAVIGATION ON A ROUTE

It is possible to define several positions, Waypoints, in a sequence called route and to navigate follow the route towards the end point.

3.4.1 ADDING WAYPOINT

To create a Waypoint place the cursor on the desired position, press 'ENTER', select "WAYPOINT", press 'ENTER' again. The Waypoint is shown on the screen and it becomes the first point of the first route. A window with information on route number, symbol and name, Latitude/Longitude of Waypoint is shown on the screen. Also it is indicated the distance to cover (and/or covered, if there are several Waypoints) refer to the next Waypoint.

3.4.2 CREATING A ROUTE

Repeat the "Adding Waypoint" procedure described in the previous Par. 3.5.1. The sequence of moving the cursor and pressing 'ENTER' is continued to create the route, until you have reached the last Waypoint, your final destination. Segments connecting the Waypoints are shown, and the starting point is identified by a circle surrounding the first Waypoint of the route; the distance to cover is shown too.

3.4.3 DELETING WAYPOINT

To delete the Waypoint, place the cursor on the desired Waypoint, press 'DELETE'. Press 'ACCEPT' to confirm the deletion. The Waypoint is deleted and a new line between previous and next Waypoint is shown. The deleted Waypoint remains shaded until the screen is redrawn.

When the cursor is placed on the desired starting Waypoint (it can be the first Waypoint of the route or not) press 'GO TO', select "CURSOR" and press 'GO TO' again or 'ENTER'. The Waypoint symbol is shown enclosed in a circle and a dot line connecting the Target with the ship. All navigation data are referred to the Target placed.

The Target automatically is moved on the next Waypoint on the route when the Target is reached.

Otherwise placing the cursor on Target and pressing 'NEXT' the Target is moved on the next Waypoint on the route. The cursor is moved on the actual Waypoint Target (if the Target is placed on the last Waypoint on the route 'NEXT' is not active). When the cursor is on the Target, pressing 'PREVIOUS' the Target is moved on the previous Waypoint in the route. The cursor is moved on the actual Waypoint Target (if the Target is on the first Waypoint of the route 'PREVIOUS' is not active).
3.4.4 TIME TO GO
When the Target is placed the TTG value (if selected) is shown in the Text Area.

3.4.5 DELETING TARGET
Place cursor on Target icon, press 'STOP'. A window to confirm the navigation interruption appears on the screen. Press 'ENTER' or 'GO TO': the symbol that identifies Target remains the screen until it is redrawn.

3.5 INFORMAZIONI CARTOGRAFICHE C-MAP NT MAX

MAX is a major evolution of the NT/NT+ product technology. Key points are:

3.5.1 NEW DATA FEATURES
- Tides and Currents (intuitive arrows show direction and strength)
- World Background Charts with terrestrial data
- Value Added Data (Pictures and Diagrams, Land Data)
- Enhanced Port Info

3.5.2 NEW PRESENTATION FEATURES
- Clear View (advanced legibility techniques providing more chart data on the screen)
- Clear Info (sophisticated "Human Dictionary" to translate Nav-Aid abbreviations found on paper charts)
- Dynamic Fonts and Symbols
- Dynamic Nav-Aids (an innovative and dynamic presentation mode)
- Flexi-Zoom (increased Under and Over Zoom between chart levels, resulting in optimal scale display for any situation)
- Dynamic Elevation Data (optimized palettes for chart plotters with 256 or more colors; includes new NOAA palette for US market)
- Perspective View ("Real World" perspective view of the chart, updated real-time during navigation)

3.5.3 MAX AND NT/NT+ C-CARD COEXISTENCE
- When NT+ data and MAX data cover different areas, the chart plotter gets data from both charts (depending on the current position).
- When NT+ data and MAX data cover the same area, the chart plotter gets data only from MAX chart.

3.6 BACKGROUND CHARTS

The internal background charts can be updated to include the MAX A and B level charts which provide improved marine data, rivers, lakes, terrestrial data (major streets, highways, railways, etc...), nav-aids, depth areas, territorial water areas, etc... by reading them from a special data C-CARDs (contact your local dealer).
3.7  PICTURES & DIAGRAMS

The MAX data format allows assigning one or more image to any cartographic object. These Pictures are typically used to facilitate the identification of cartographic objects or places around the map: they can be the landscape layout nearby a harbor, the shape of a bridge or of a buoy etc.

On some objects, such as bridges, the image associated can represent the Diagram representing the shape of the objects and the various characteristics (length, height, type of bridge etc.).

![Fig. 3.7 - Pictures and Diagrams](image)

3.7.1 QUICK INFO ON OBJECTS WITH PICTURES

On the Quick Info, there will be the camera icon on the top bar of the window if at least one of the objects found has one or more pictures associated.

3.7.2 EXPANDED INFO ON OBJECTS WITH PICTURES

On the Full Info, there will be the small camera icon on a corner of the square containing the object icon or a big photo icon centered on the square for the object without icon.

To see the picture press 'PICTURE' when the object with a picture is highlighted.

3.7.3 CHANGE PICTURE SIZE

When the picture is shown, it is possible to fit it to screen by pressing 'ENTER'.

3.8 MAP MENU

To select the map configuration (available only from the chart page):

➤ Press any soft key + 'MAP'

3.8.1 ZOOM TYPE

➤ Press any soft key + 'MAP' + "ZOOM TYPE" + 'ENTER'

This feature allows more expansions or compression of the chart scale while zooming in or out. Zoom Mode has two options; STANDARD (default) or FLEXI-ZOOM. When in FLEXI-ZOOM mode, a short 'ZOOM...' push causes a change of chart, whilst a long 'ZOOM...' push (press and hold) causes a pop-up window to be displayed on a corner of the screen. The window shows the current Zoom Factor.

By pressing 'ZOOM IN'/'ZOOM OUT' the map is expanded or compressed according to the zoom factor selected.
The Window is automatically closed if 'ZOOM...' is not pressed for 2 seconds and the selected zoom factor will be used at the next zoom in/out.

### 3.8.2 Fonts & Symbols

Press any soft key + 'MAP' + "FONTS & SYMBOLS" + 'ENTER'

On MAX charts it is possible to set the size of all names and symbols drawn on the charts, selecting between Normal size (the regular characters size) and Large size.

**NORMAL size**

**LARGE size**

![Example of Normal size (on the left side) and Large side (on the right side) settings](image)

### 3.8.3 Perspective View

Press any soft key + 'MAP' + "PERSPECTIVE VIEW" + 'ENTER'

Chart data may be projected in perspective mode during navigation. This function allows setting the panoramic View of the chart. As the upper side of the map is more compressed than the lower side, a wider map area is visible. The perspective view allows showing more chart information immediately ahead and around the cursor.

![Perspective View](image)

### 3.8.4 Dynamic Nav-Aides

Press any soft key + 'MAP' + "DYNAMIC NAV-AIDS" + 'ENTER'

This function allows settings blinking lights on Nav-Aids. The blink period and color of each Nav-aid is read from the Nav-Aid attributes available on the data cartridge. When the ship is inside the Nav-Aid nominal range, the light of the Nav-Aid will start blinking.

When Dynamic Nav-Aides option is set to On, when the flashing light is Off, or when fix position is out of the sector, the light color is displayed by using a faint light color.
3.8.5 MIXING LEVELS
Press any soft key + 'Map' + "MIXING LEVELS" + 'ENTER'

When the map coverage at the current zoom level does not fill the entire screen, the chart plotter draws the rest of the map expanding the cartographic information read from, at most, two zoom levels above the current zoom level. For this reason the map is drawn three times: firstly it draws the two levels before the current level and then the current level. The area covered by the cartographic data read from the previous levels is identified by a dotted pattern. When the cursor is moved on an area not covered by data of the current level the chart plotter zooms out to the first level covered by cartographic data. The default setting is Off.

Note
The Mixing Levels function works only with the new C-CARDS. It also affects the speed of the redraw of the screen. If this function is not used it may be disabled.

3.8.6 SAFETY STATUS BAR (DSI = Data Safety Indicator)
Press any soft key + 'Map' + "SAFETY STATUS BAR" + 'ENTER'
The possible choices are listed in the table below:

<table>
<thead>
<tr>
<th>Choice</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON</td>
<td>the Safety Status Bar is shown</td>
</tr>
<tr>
<td>OFF</td>
<td>the Safety Status Bar is not shown</td>
</tr>
<tr>
<td>ICON</td>
<td>the Safety Status Bar is not shown, but a Warning alarm Icon will blink on the corner of the map screen as soon as any item controlled by the DSI (Data Safety Indicator) function returns an alarm condition. The Warning Icon remains displayed until the alarm condition persists. When Safety Status Bar is On, a status bar with six boxes showing the status of certain functions is displayed. Any warning or alarm condition is identified by the red color to indicate possible risk.</td>
</tr>
</tbody>
</table>

Fig. 3.8.6 - Safety Status Bar

Boxes definition is as follows:

1. **Zoom**

   - Chart Lock: red when the chart is zoomed in more than twice normal scale, gray otherwise.

2. **Best Map**
   - Red when a more detailed chart is available under the cursor position.

3. **Data Off**
   - Red when at least one of the following objects or layers is turned off (by the user): Depths/soundings; Wrecks/obstructions; Tracks/routes; Attention areas; Nav-Aids.

4. **Declutter**
   - Displays when Clear View function is On.

5. **Dangers**
   - Red when “Guardian Technology” detects one of the following objects: Land, Intertidal, Depth Area, Rocks, Obstructions, Shoreline Constructions, Fishing Facility, Wrecks, Dragged area, Diffusion area, Mooring facilities, Pingos and Production installations.
6 Caution
Red when “Guardian Technology” detects cautionary or restricted area.

3.8.7 CURRENTS PREDICTION
Press any soft key + 'MAP' + "CURRENTS PREDICTION" + 'ENTER'.
It is possible to see the variation of the Tidal arrows on the selected area at any given time. A window is shown on the low-left side of the chart, press 'SET' to set data and time, and 'DECR'/'INCR' to decrease/increase the time. Press 'EXIT' to exit.

3.9 INFO FUNCTION
Place the cursor on the desired position then:
Press any soft key + 'MAP' + "INFO" + 'ENTER'
to display the Info tree and the expanded Info page.

3.9.1 INFO TREE AND EXPANDED INFO PAGE
This page combines the Info Tree and the Expanded Info pages; this gives the advantage of showing the details of the object selected on the Info Tree while the cursor is moving through the Info Tree’s items.
The upper side of the page contains the Info Tree and the Lower side contains the expanded information. While moving the cursor through the Info Tree, all the relevant information of the selected object is shown on the lower part of the page.
When the selected object is a Tide Height, pressing 'ENTER' the Tide page is shown. Pressing 'CLEAR' the page is closed. To select the next page press 'PAGE DN'. 'HOME' restarts the Expanded Info function.

3.9.2 GETTING TIDE INFO
To obtain Tide Info:

Place the cursor on the Tide symbol, a automatic Info window is opened:
To display the Tide Graph page press 'EXPAND' then 'ENTER' (otherwise press 'EXP ALL' to select all available information).

Using the cursor key, it is possible to move the cursor anywhere on the graph and display the time, height (vertical cursor) and drought (horizontal cursor) on a particular graph point. Also use 'ZOOM IN' or 'ZOOM OUT' to go to previous or next day and 'ENTER' to set date (move the cursor key up/down to insert the desired number and use it left/right to move cursor to left/right).

**Note**

Tide graphs are an approximation of the tide and they should be used in conjunction with traditional tide tables and navigational methods.

### 3.9.3 GETTING PORT INFO

Upon viewing the chart of a port or harbor, you will see a Port Info icon that can be clicked on to query the available information immediately displayed with many details.
The available information is shown in the Automatic Info window where icons of the available services are shown:

To expand information on the object press 'EXPAND' (otherwise press 'EXP ALL' to select all available information).

### 3.9.4 ENHANCED PORT INFO

MAX charts include additional port services that were not present before. Additional attributes of Port Areas and Port Marinas have been included (Location, Country, Region, State, Harbor master telephone number etc).

### 3.10 MAP SETTINGS

This menu allows the user to customize the screen:

Press any soft key + 'MAP' + "OTHER MAP CONFIGURATION" + 'ENTER'

#### 3.10.1 DISPLAY MODE

Press any soft key + 'MAP' + "OTHER MAP CONFIGURATION" + 'ENTER' + "DISPLAY MODE" + 'ENTER'

The default setting is On.
Value-Added Data: The Value Added Data (VAD) is a collection of additional cartographic objects which are not present on the original paper chart (from which the electronic chart derives). These objects have been obtained from other sources (that C-MAP believes to be reliable) and then merged to the electronic charts in order to provide more information useful for the navigation.

VAD object can be any cartographic objects and it can be distinguished from the official-chart-objects from the Quick Info. A dedicated icon is shown on the Quick Info window to indicate that the object queried is a VAD.

The same icon is also shown on the Full Info page and in addition the extended text Value Added Data is shown on the details of the VAD object.

Chart Lock: When Chart Lock is On, the available zoom scales are only the ones containing cartographic data. Instead when Chart Lock is Off, it is possible to zoom down into zoom scales not covered by cartographic data after the last available zoom scale covered by cartographic data.

Note
When an empty level is entered, the message “No cartographic coverage” is shown on a window in a corner of the map display. The warning message is always displayed as long as the current zoom has no data coverage.

The DSI window, if present, will show “NO CHART”, when an empty level is entered in the location of map expansion mode.

The secret is to find a compromise, a point where you can combine a date with a word, creating a unique filename. The maximum length of the filename is 8 characters. The characters may be numbers (0, ..., 9), letters (A, ..., Z) and spaces (for example legal identifiers are "ABC", "AA", "12121212", "A B C", "1 A 1", and so on.)

5. Special Functions

5.1 C-WEATHER SERVICE

C-Weather Service is an innovative meteorological forecasting system with the ability to visualize the weather forecast, overlaying it on cartography. The weather data is held on C-MAP’s weather server, which can be accessed via a C-COM modem connected to the chart plotter or by using the C-MAP personal Suite (or the DPS - Dealer Programming System) saving the weather data on a User C-CARD. The weather data are overlaid on a map page as layers. The Weather format data available are:

### 5.2 AIS MENU

AIS is an Automatic Identification System. It has been introduced to improve the safety of navigation by assisting in the efficient operation of ship-to ship, ship reporting and VTS applications. The system should enable operators to obtain information from the ship automatically, requiring a minimum of involvement of ship’s personnel, and should have a high level of availability. AIS transponders installed on IMO vessels use VHF frequencies to:

- Transmit details of their own vessel
- Receive details from other vessels or navigation aids within VHF range.

Information being transmitted from vessels over 300 tons that, due to recent worldwide legislation, are required to fit Class “A” AIS transponders.

Connecting to the chart plotter an AIS receiver (please contact your local dealer), vessels with AIS transponder within VHF range are displayed on screen giving the skipper or navigator a visual interpretation of the data of nearby vessels. This improves safety, and specifically for collision avoidance reasons.

### 5.2.1 AIS SYSTEM DEFINITIONS

Target = It is a vessel equipped with AIS. Information about the targets is being received by AIS Receiver and displayed on the screen.

CPA = Closest Point of Approach is the closest distance that will be achieved between your vessel and the tracked target, based on your vessel’s speed and direction and the target’s speed and direction.

CPA Limit = This is the distance from your vessel that a target may reach before a target is deemed a threat.

CPA Alarm = Occurs if CPA is less or equal to CPA Limit. This test is done for active targets only.

TCPA = Time to closest Point of Approach is the time remaining until the CPA will occur.

TCPA Limit = This is the time remaining before the CPA is reached.

TCPA Alarm = Occurs if TCPA is less or equal to TCPA Limit. This test is done for active targets only and if CPA value is less or equal to CPA Limit.
Radio Call Sign = International call sign assigned to vessel, often used on voice radio.

Name = Name of ship, 20 characters.

MMSI = Maritime Mobile Service Identity.

MMSI number = A unique 9 digit number that is assigned to a DSC radio station. It primarily registers the boat information in the U.S. Coast Guard’s national distress database for use in emergency situations.

Active Target = Target located within the Activation Range. Active target is represented by oriented triangle with COG and Heading vectors. Rate of turn may also be displayed.

Dangerous Target = Target detected by CPA or TCPA Alarm. Dangerous target is Active Target by definition. For better visibility Dangerous Target symbol is flashing.

Sleeping Target = Target located outside the Activation Range. Sleeping target is represented by a small oriented triangle.

Lost Target = When the AIS info is not received from that vessel for 3.5 minutes. The presentation will be a flashing black triangle with a cross through.

Activation Range = Range around your boat where targets become active. AIS target become active within this range. Activation Range should be greater than CPA Limit by definition.

Note
A target is removed from the screen if data is not received for 10 minutes. The maximum number of tracked targets is 100. Depending on the scale the presentation of the targets change to remove clutter on the screen. This information is updated every 3 seconds to 6 minutes depending on speed and rate of turn, enabling the track of the vessels in range to be plotted.

- **CPA and TCPA values**

**Note**
The selected AIS target icon is surrounded by a square frame when user places the cursor over the icon.

5.3 C-LINK

C-Link system is a feature which allows to sharing the same cartographic data between two chart plotter units (CP) linked via serial I/O port.

In order to activate C-Link function, a “MAX data C-CARD” (called REGULAR C-CARD) must be inserted into one of the two chart plotters and a special MAX data C-CARD (called MIRROR C-CARD) must be inserted on the other chart plotter. The two MAX data C-CARDS must have the same code and revision. So, the MIRROR C-CARD can be utilized only on a chart plotter linked to another chart plotter provided with the equivalent REGULAR C-CARD.

It is important to point out that the two chart plotters must have the update s/w versions that allow C-Link function.

5.3.1 HOW C-LINK SYSTEM WORKS

When the CP is powered up, it switches into the “Stand-Alone Mode”. In this work mode, the CP unit periodically scans all the available C-CARD slots searching for MIRROR C-CARDS. When one or more MIRROR C-CARD is found (in one or both CPs) a special connection is established between the CPs to habilitate the MIRROR C-CARDS. If a regular C-CARD which has previously activated a MIRROR C-CARD is removed, even the MIRROR card will be not read anymore on the other unit.

5.3.2 C-LINK SERIAL CONNECTION

The two chart plotters should be connected via serial ports. Any of the available ports can be used, the software will recognize automatically the serial ports used. A typical connection is as follows:

<table>
<thead>
<tr>
<th></th>
<th>CP1</th>
<th>CP2</th>
</tr>
</thead>
<tbody>
<tr>
<td>TX</td>
<td>————&gt;</td>
<td>RX</td>
</tr>
<tr>
<td>RX</td>
<td>&lt;———</td>
<td>TX</td>
</tr>
<tr>
<td>GND</td>
<td>&lt;———&gt;</td>
<td>GND</td>
</tr>
</tbody>
</table>

5.3.3 C-LINK NAVIGATION DATA TRANSFER

This function allows transferring C-Link navigation data (Route Name, Destination ID & Position, Next Waypoint ID & Position, Total Route length, Fuel Consumption Rate, ETA, TTG etc.) (Hereinafter “c-link navigation data”) between two chart plotters linked through the C-Link system. The chart plotters can be set to operate in two modes:
- MASTER mode (Primary Chart Plotter that sends data)
- SLAVE mode (Secondary Chart Plotter that receives data)

When the navigation is activated on the Master chart plotter, the C-Link navigation data will be continuously sent to the Slave until the navigation is active. If the Master is navigating to a Single Destination, the Slave will show the Destination position and activate the navigation to it. If the Master is navigating to a Route, the Slave will show the Route Leg composed by the Destination and the Waypoint after the Destination (Next Waypoint) and activate the navigation to it. Any variation to the current C-Link navigation data will be transferred from the Master to the Slave. The Slave will be provided with a few dedicated pages to show the C-Link navigation data received from the Master.

5.3.4 OPERATIONS

It is important remark, once more, that this function does not transfer the whole route but just the information relative to the navigation. Such information will be removed from the Slave Chart Plotter as soon as the navigation is terminated. C-Link navigation data is exchanged by using two NMEA-0183 C-MAP proprietary sentences: $PCMPN,1 and $PCMPN,2.

When the navigation is activated on the Master, it starts outputting the C-Link navigation data. If the Slave is connected, all c-link navigation data received are stored in its memory and the navigation is started.

The information sent by the Master consists of the following values:
- Navigation mode (To Single Destination / to a Route )
- Route Name (*)
- Destination ID
- Destination Position
- Next Waypoint ID (*)
- Range from Destination to next Waypoint (*)
- Bearing from Destination to next Waypoint (*)
- Route Length (*)
- Distance from Destination to Last Route Waypoint (*)
- Remaining Route Legs (*)
- Planned Cruising Speed
- Average Fuel Consumption
- Initial Fuel Load

C-Link navigation data can refer to:
- Single Destination navigation
- Route Following navigation.

Values identified by (*) are sent only for Route Following navigation.

The Destination Icon, Navigation leg (Fix Position to Destination), the Next Waypoint Icon and all other relevant c-link navigation data will be shown on the Slave chart plotter. Any variation of the C-link navigation data on the Master will be communicated to the Slave so to keep data aligned on both devices.

5.3.4.1 Master Chart Plotter

Operating mode

To select the Master mode (Primary Station) follow the procedure:

Press any soft key + 'SETTING' + "INPUT/OUTPUT" + 'ENTER' + "C-LINK" + 'ENTER' + 'Primary Station' + 'ENTER'

CHOICE FOR NAV-STATION 11:

'SERVICE' + "INPUT/OUTPUT" + 'ENTER' + "C-LINK" + 'ENTER' + "Primary Station" + 'ENTER'
Master mode is the default factory setting. All regular chart plotters’ functions are allowed. As soon as the Destination is placed, the master chart plotter will start transmitting all c-link navigation data. In Master mode the C-Link navigation data received from the NMEA port is ignored. So, if the two chart plotters are both operating in Master mode, the C-Link navigation data sent by the other Chart Plotter never processed. Under such condition if the navigation is activated on one of the two Chart Plotters, a warning message will be shown to notify that the C-Link navigation data will be ignored by the other Chart Plotter.

5.3.4.2 Slave Chart Plotter

Operating mode
To select the Slave mode (Secondary Station) follow the procedure:

Press any soft key + 'SETTING' + "INPUT/OUTPUT" + 'ENTER' + "C-LINK" + 'ENTER' + "Secondary Station" + 'ENTER'

CHOICE FOR NAV-STATION 11:
'SERVICE' + "INPUT/OUTPUT" + 'ENTER' + "C-LINK" + 'ENTER' + "Secondary Station" + 'ENTER'

When Slave mode is set, the chart plotter cannot manipulate the C-link navigation data anymore.

Stop current navigation
If the navigation was already active, it will be disabled as soon as Slave mode is set. An appropriate warning message will be shown to notify that the Navigation is already active and to confirm whether Slave mode can be set.

Inhibit Navigation operation
As soon as Slave mode is set, the destination cannot be placed anymore either the C-link navigation data is received from the Master or not. Also, when the C-link navigation data is received from the Master, it will not be allowed to deactivate the Navigation.

Inhibit Route following
While navigating to the route received from the Master the destination is reached (either applying distance or perpendicular criteria), the destination will not be moved to the next Waypoint on the route.

MOB handling
If the Navigation to the external destination is active and the MOB key is pressed on the Slave Chart Plotter, the MOB is placed but the navigation to the MOB is not activated.

Notes
While navigating to the external destination the Operating Mode is switched to Master mode, the navigation to the external destination will be terminated. An appropriate warning message will be shown to notify that the Navigation to the external destination is active and to confirm whether Slave mode can be set. Setting Slave mode, the C-Link navigation data will be deleted. The C-Link navigation data are deleted at Power Off.

5.3.4.3 C-Link navigation data: Acquisition and Display
As soon as the C-Link navigation data is received, the Slave parses the information received and executes the relative actions depending on its current working status.

Note
When the Navigation to the external Destination is activated, the Slave Chart Plotter will show all relevant c-link navigation data exactly like when the destination is not the external
one: (Destination Name, DST and BRG to Destination, calculate XTE, calculate TTG etc). These values will be displayed all places where required and they will be used to format NMEA-0183 output data.

5.4 DSC

The DSC (Digital Selective Calling) is a method of establishing a VHF radio call; it is used to announce urgent maritime safety information broadcasts. This system allows mariners to instantly send Distress Call or/and Position Request to the other vessels equipped with a DSC transceiver within range of the transmission. The Distress Call, that allows to receive a position of the vessel in distress, and the Position Request, a great feature for anyone wanting to know the location of another vessel - for example you buddy that is catching fish, or finding the location of a person you are cruising with, are performed by an external device, the DSC VHF radio. The chart plotter interfaced with a DSC VHF radio prompts the user to see the GPS position of the vessel in distress and also allows for easy navigation to the vessel. The Distress Call and the Position Request icons that are displaying on the screen, are shown in the following table:

<table>

Note

The label can be the MMSI or the corresponding vessel’s name. If in the DSC Directory the MMSI has been associated to its relative vessel name, the vessel’s name is shown in the label instead of the MMSI.

5.4.1 DISTRESS CALL AND POSITION REQUEST

In a distress situation, a vessel that is equipped with a DSC VHF radio and connected to a GPS, has the capability to transmit a DSC Distress Call with GPS Position.

When the VHF radio receives a DSC Distress Call, the position information of
the vessel in distress is transferred to the chart plotter. The chart plotter logs the Distress Call into the DSC Log and also marks the position of the vessel in distress on the Chart page. A pop-up screen advises the user that a Distress Call has been received. Within the pop-up screen it asks the user if he would like to view the call on the Chart page or exit the pop-up screen. By selecting the item "VIEW ON CHART" and press 'ENTER' two options are shown:

**Go To Vessel**: Activates the navigation to the Distress Call or Position Request icon. The chart plotter changes the map scale to allow showing the Distress Call (or Position Request) icon and the vessel’s icon simultaneously on the screen. The chart plotter then verifies if there are obstructions (land or low water) between the two positions. If obstructions are found the chart plotter shows a pop-up screen saying that the navigation to the Distress Call cannot be set automatically and the user must define a route to avoid the obstacles.

**Stay on View**: Exits the pop-up screen and remains on the selected map screen.

### 5.4.2 DSC MENU

To select the DSC menu:

**Press any soft key + 'SETTING' + "DEVICES" + 'ENTER' + "DSC" + 'ENTER'**

PALETTE (For Color Chart Plotter)
Palettes are available for selecting Normal, NOAA, Night Vision or Sunlight for Palette. Normal is recommended when the chart plotter is not exposed to the direct sunlight. When this mode is set the maps are displayed in order to use colors as similar to the ones used in the original paper charts. NOAA allows setting NOAA paper chart colors presentation. Sunlight is designed to enhance the visibility of the screen when the chart plotter is exposed to the sunlight. The maps are much brighter than in the other modes and the depth areas are filled with white color so different depth areas are easily distinguishable. Night Vision is recommended when the environment is dark in order to reduce the glare of the display. The chart plotter displays maps and screen in darker colors.

This function can calculate the tide heights for any past or future date and as a by-product of this calculation will also display the Maximum and Minimum Tide height and time for the day selected plus the times of Sunrise and Sunset. At some chart levels, the chart plotter will display a new Tide Diamond Symbol for every Port or tide point in the database covered by that particular C-CARD.

WAAS = Wide Area Augmentation System
The Federal Aviation Administration (FAA), in cooperation with other DOT organizations and DOD, is augmenting the GPS/SPS with a satellite-based augmentation system, the WAAS. It will provide a signal-in-space to WAAS users to support en route through precision approach navigation. After achieving initial operational capability, the WAAS will then be incrementally improved over the next years to expand the area of coverage, increase the availability of precision approaches, increase signal redundancy and reduce operational restrictions.

WAYPOINT
Any point to which one intends to navigate. A sequence of Waypoints makes up a route plan.

WGS-84 = World Geodetic System 1984
Coordinate System or Datum developed by the Defense Mapping Agency (DMA).

ZOOM-IN
Shows more detail in a smaller area.

ZOOM-OUT
Operates similarly to zoom -in, but in the reverse, showing a wider but less detailed view.

XTE = Cross Track error
The distance from the ship’s present position to the closest point on a line between the origin and destinations Waypoints of the navigation leg being travelled.
7. System Test

7.1 SYSTEM TEST

If you have connected your position-finding device according to the instructions, and chosen the proper menu selection for your device, and are still having problems with your chart plotter, the extended auto-test should help determine the problem. Make sure the chart plotter is turned Off. While pressing and holding any other key, turn the chart plotter On. A new menu will appear on the display:

![Fig. 7.1 - System Test](image)

Use the cursor key to select the desired test: this will display in reverse video and with the relative menu window. To choice the test press 'ENTER'. To exit from any submenu press 'CLEAR'. To exit from the System Test turn Off the chart plotter.

7.1.1 RAM Menu

This test verifies the integrity of the memories and if desired during this test all the internal memory can be erased and the default setting restored.

■ RAM Test
To verify the integrity of the RAM. If on the screen the message "ERROR" appears, the RAM is physically damaged.

■ RAM Clear
To clear internal memory. If the chart plotter exhibits unusual behavior, or appears to be malfunctioning, it may be possible to correct the problem by clearing RAM. This operation will erase all Marks, Events, Routes, stored track plots and destinations. It will also return all selections (Input Data Format, Autopilot selection, etc.) to original default values.

7.1.2 DIM Menu

To select the desired value for keypad light.

■ Contrast
The first option allows to adjust the contrast. Each time you pressed the cursor key
to right, the screen will decrease brightness, instead of to left it will increase brightness.

■ Backlight
The second option allows to set the keyboard backlight.

7.1.3 CARTRIDGES
To check the C-CARD.

■ Internal Data Base Test
The first option allows to check the background cartography.

■ C-CARD Test
To test the C-CARD. There are the possible situations:
1. if there is a C-CARD inserted in the slot and there is not a malfunction, the name of the C-CARD zone and the message "OK" are shown.
2. if there is a C-CARD inserted in the slot, but it is a damaged C-CA
3. if there is not any C-CARD inserted in the slot, the message "not present" is shown.
4. if there is an **User C-CARD** inserted in the slot, the message "USER C-CARD" is shown.

■ C-CARD Connector
Indicates if there is a malfunction in the connector. It is used only in production.

7.1.4 MODEM TEST
To check the Modem connections. Press 'ENTER' to select the preferred Port related to the connections made, to the Port that the Modem C-COM is connected.

7.1.5 SERIAL PORT
If you are having problems receiving data from the position-finding instrument, this test should help determine the problem.

■ Change Parameters
To change the parameters of the serial interface. This menu allows to select the **Port**, the **Baud Rate** between 4800 or 9600, the **Data Bits** (Word Length) between 7 or 8, the **Parity** between even, odd or none, the **Stop Bits** between 1 or 2.

■ Input Data Display
To allow the chart plotter to act as a computer terminal and display the incoming data exactly as it received. If the data displayed on the screen is unrecognizable, you may have selected the wrong input parameters for your particular receiver. Check your receiver manual to be sure that you have selected the proper interface format. If the screen is blank, you may have a broken connection, and no data is being received. Use 'ZOOM IN' to stop (or continue after pause) data displaying, 'ENTER' to show data in hex or ASCII mode (normal or small) and 'CLEAR' to exit.

7.1.6 VIDEO TEST
Allows a full text on the functionality of the screen.

7.1.7 EXTERNAL ALARM
To check if the External Alarm has been transmitted.
appendix A. Troubleshooting

THE CHART PLOTTER DOES NO TURN ON
Make sure that the correct voltage (10-18 volt dc) is present.heck also that the polarity is correct. Refer to the Par. 2.2.

THE CHART PLOTTER DOES NOT GET A VALID FIX
Make sure that no metal obstacle is placed around the chart plotter acting as a shield for the antenna. If, after 15 minutes, the chart plotter does not get the fix, turn it Off and On again.

THE SCREEN BECOMES DARK AFTER SOON EXPOSITION
Adjust contrast (see Par. 2.3).

THE CHART PLOTTER DOES NOT RESPOND TO ANY COMMAND
Try to turn Off, and then turn On. If the problem persists, erase the memory (see Par. 7.1).
B. GPS Receiver

B.1 INSTALLING

Choose a location for the antenna that has a clear view of the sky. Ensure there are no major obstructions or fixtures in the immediate proximity to the antenna. The antenna relies on direct “line of sight” satellite reception. If you are unsure that the chosen location is suitable it may be advisable to mount the antenna in a temporary manner to verify correct operation. The thread used on the antenna (1 inch, 14 TPI) is an industry standard thread used on a wide range of mounting brackets, including the swivel joints commonly used for angled surfaces. However due to the manufacturing process of these mounting brackets you may see that there is some slop when tightening down the antenna to the bracket. This is of no concern however as the antenna must be tightened until the antenna stops rotating on the antenna mounting bracket.

![Fig. B.1 - Installazione Antenna GPS (I)](image1)

The antenna design also allows for easy flush mounting.
1. Apply the adhesive mounting template sheet in the area that was verified to receive satellite signal well.
2. Then, following template instruction, drill a 0.95 inch (24 mm) hole and three 0.155 inch (4 mm) holes.

![Fig. B.1a - Installazione Antenna GPS (II)](image2)

3. Remove the template and let the cable go through the central hole.
4. Apply a small coat of RTV to the underside of the antenna.
5. Place the antenna and then screw it with the three M3 screws.
